Professional Summary

Driven Artificial Intelligence student specializing in Bioinformatics, with a strong foundation in Data Engineering, Machine Learning, and Computer Vision. Proven ability to build end-to-end data pipelines, develop predictive models, and engineer intelligent robotic systems. Seeking a challenging internship to leverage technical expertise in Python, SQL, and AI to deliver scalable, data-driven solutions in a professional environment.

Technical Experience

Data Engineering Trainee , <i>Digital Egypt Pioneers Initiative (DEPI)</i>	2025 – 2026
- Completed intensive training in Advanced Python, SQL, and Database Management for large-scale data systems. - Developed and optimized data pipelines and Big Data processing workflows utilizing Microsoft Azure Data Engineer tools. - Integrated AI methodologies into data engineering tasks and successfully delivered a comprehensive Smart Technology Capstone project.	Remote
Robotics Engineer Trainee , <i>Smart Technology Program</i>	06/2025 – 08/2025
- Engineered an autonomous robotics system using Arduino and multiple IR sensors, programming complex automated behaviors. - Applied AI control logic and hardware-software integration to achieve intelligent, sensor-based navigation and automation.	Kafr El-Sheikh, Egypt

Education

Bachelor of Artificial Intelligence (Bioinformatics) , <i>Kafr El-Sheikh University</i>	2024 – 2028
GPA: 3.88 / 4.00 (Excellent with Honors)	
Data Engineering Track , <i>Digital Egypt Pioneers Initiative (DEPI)</i>	2025 – 2026

Core Competencies & Skills

Programming Languages Python, C++, SQL, JavaScript, HTML5, CSS3, OOP	AI & Machine Learning Regression Models, Feature Engineering, Recommendation Systems, Data Preprocessing, Model Evaluation, EDA
Data Engineering Data Pipelines, Big Data Processing, Database Management, Statistical Analysis	Computer Vision & Robotics OpenCV, Image Processing, Contour Detection, Perspective Transformation, OMR, Arduino, Embedded Systems
Libraries & Tools Pandas, NumPy, Matplotlib, Scikit-learn, XGBoost, Tkinter, MediaPipe, Git/GitHub, VS Code, Jupyter, Azure	

Certifications

Machine Learning

IEEE | Focus: NumPy, Pandas, ML Fundamentals | 11/2025 – 12/2025

Database Learning Journey

IEEE | 03/2025 – 05/2025

C++ Problem Solving Path-line (1 Month)

Database

AI & Smart Systems Consulting Center, Kafr El-Sheikh University (2 Months)

Robotics & Arduino Uno Project

Smart Technology Program (50 Hours)

Technical Projects

Popular People App

08/2026

Flutter, Dart, Clean Architecture, BLoC, Google Gemini AI

- Developed a modern, cross-platform mobile application utilizing Flutter and Clean Architecture principles for highly scalable and maintainable code.
- Integrated TMDB REST API to fetch and display trending celebrity profiles, bios, and high-resolution interactive galleries.
- Implemented robust state management using BLoC/Cubit patterns and local storage for seamless user favorites persistence.
- Integrated Google Gemini AI as a smart conversational assistant, enhancing user engagement and demonstrating advanced AI integration capabilities.
- GitHub: github.com/GANNAAMR66/popular-people-flutter 

Vitalix – Calories Burn Prediction System

03/2026 – 05/2026

Python, XGBoost, Tkinter, Scikit-learn

- Developed an AI-powered desktop application to predict calories burned using an XGBoost regression model on physiological datasets.
- Executed end-to-end machine learning workflows: data preprocessing, model training, and rigorous evaluation.
- Designed an interactive Tkinter GUI featuring real-time predictions, input validation, and seamless model integration.
- GitHub: github.com/GANNAAMR66/Vitalix-Calories-Predictor 

IMDb Movie Recommendation System

04/2026 – 05/2026

Python, Pandas, Scikit-learn, NLP

- Built an end-to-end data analysis pipeline for the IMDb Top 1000 Movies dataset, performing advanced data cleaning and EDA.
- Engineered a content-based recommendation engine utilizing TF-IDF vectorization and Cosine Similarity.
- Generated actionable business insights through comprehensive data visualization and statistical analysis.
- GitHub: github.com/GANNAAMR66/IMDb-Movie-Analytics 

OMR Auto Grading System

02/2026 – 05/2026

Python, OpenCV, Computer Vision

- Spearheaded a university team to develop an automated Optical Mark Recognition (OMR) grading system.
- Implemented advanced image processing techniques, including perspective transformation and contour detection, to accurately grade rotated/skewed answer sheets.
- Built a user-friendly GUI application that automates grading and exports detailed analytical reports to Excel.
- GitHub: github.com/GANNAAMR66/Core_vision 

Mobile Camera Streaming App

02/2026

Python, OpenCV, Socket Programming

- Engineered a real-time, low-latency video streaming application from a mobile device to a laptop over a local Wi-Fi network.
- Established a reusable, scalable foundation for future computer vision applications, such as real-time object and face detection.
- GitHub: github.com/GANNAAMR66/Mobile-Camera-Streaming-to-Laptop-using-OpenCV 

Count Fingers Using OpenCV

Python, OpenCV, MediaPipe

- Developed a real-time computer vision system to detect and count fingers using hand tracking and convexity defects analysis.
- Utilized MediaPipe and OpenCV to ensure high-accuracy gesture recognition and robust performance under varying lighting conditions.
- GitHub: github.com/GANNAAMR66/Count-Fingers-Using-OpenCV 

Line Follower Robot

11/2024 – 12/2024

Arduino, Embedded Systems, C++

- Developed an autonomous line-following robot utilizing Arduino Uno, IR sensors, and an L298N motor driver for precise movement control.
- GitHub: github.com/GANNAAMR66/Arduino-Based-Line-Follower-Robot 

Temperature Prediction Model

09/2025 – 12/2025

Python, Numerical Analysis, Arduino

- Developed a temperature prediction model applying Bisection Method and Polynomial Interpolation for temperature estimation.
- Built a model that accurately predicts temperature at any hour between 0 and 24 based on historical input data (Cairo).
- GitHub: github.com/GANNAAMR66/-Temperature-Predictor-24h-Cairo-Approx.-Arduino-Based 

ilya Hoodies E-Commerce Website

11/2025 – 12/2025

HTML5, CSS3, JavaScript

- Developed a responsive e-commerce website for an Egyptian hoodie brand, featuring a product catalog and custom request pages.
- Implemented responsive layouts for desktop and mobile devices, improving user experience through a clean, intuitive interface.
- GitHub: github.com/GANNAAMR66/ilya--hoodies 

Digital Safe Box

Digital Logic Design, Hardware

- Designed and implemented a digital safe box using AND, XOR, and NOT logic gates, applying Boolean logic for switch-based authentication.
- Tested and verified circuit functionality for different input combinations to ensure secure digital lock operations.
- GitHub: github.com/GANNAAMR66/Digital-Safe-Box-using-Logic-Gates
